

For immediate release February 08

From Sportsbike to Tourer and Back with ConvertiBARS™

Introducing ConvertiBARS™ multi-adjustable handlebar system

ConvertiBARS™ are the first handlebar system that allows the rider to fully customize the riding position in less time than it takes to fill the tank with fuel. One in five British motorcyclists owns a sportsbike and ConvertiBARS™ will help them to tailor their machines to better suit their size and use, whether on road or track.

ConvertiBARS™ may be fitted using the original brake lines, control cables and wiring. On certain models the amount of adjustment may be dramatically increased by modifying the bodywork or lengthening control cables. Once fitted, simply slacken the Cyclops clamp, using a hex key provided with the kit, and pull the bars back and up for relaxing long distance riding then drop them back down for a more track-orientated feeling.

Safety and performance is assured as ConvertiBARS™ are engineered to very high standards. The bars are manufactured from seamless stainless steel and the Cyclops clamp that secures the bars in place is incredibly strong. Laboratory testing shows that the ConvertiBARS™ are as strong and secure once positioned as the original equipment.

Most popular models of sports bike are covered, such as the GSX-R600/1000 series, as well as sports tourers like the Honda VFR and Blackbird. ConvertiBARS™ are supplied with illustrated instructions and an installation DVD. Prices start at **£239.99** inc. VAT.

How it Works

Together, the handlebar and the clamp allow a double-jointed articulation, which is the key to such a dramatic change in riding position. Not only can the bars be moved up and down, they may also be moved closer to, (or further from), the rider as well. ConvertiBARS™ differ from adjustable risers and clip-ons because (a) they offer an unrivalled variety of positions and (b) they can be altered by the rider in seconds.
