Doc's winter prescription

S Doc 100 Corrosion Protectant

Although noted for its food preservation properties, salt does little to conserve the finish of motorcycle components. Rock salt is mined in several UK locations and during winter one mine alone supplies up to 100,000 tonnes of salt per week for the authorities de-ice roads. As both Salt and water corrosion can cause lasting and irreparable damage to motorcycles, it is crucial to make sure your machine is well protected throughout the winter season.

S Doc 100 Corrosion Protectant shields all metal parts against salt and water damage and, if used regularly, can stop existing corrosion in its tracks. Simply spray S Doc 100 onto the target area and it forms a transparent, protective, 'self healing' film – which re-closes immediately after being touched – to guard against salt and water ingress. It also lubricates and displaces moisture.

Application couldn't be simpler - just spray directly from the can. S Doc 100 now has improved penetration properties, so even hard to reach areas can benefit from its corrosion-inhibiting action.

S Doc 100 Corrosion Protectant Cleaner is priced at **£10.99** including VAT for 300ml and is available from Motohaus Powersports. Call them on **01256 704909** or visit

www.motohaus.com for details of the full range of S Doc motorcycle care products.

Remember, if it doesn't say S Doc100 it isn't from Germany's No1...
