ROK™ solid luggage

ROK™ Adjustable Straps for Motorcycles

ROK™ 'flat stretch straps' are designed specifically for motorcycles to combine the best aspects of traditional bungee and tie-down straps in a simple to use package. They have four key advantages over traditional elastic straps.

1. **STRENGTH** - ROK™ straps are up to FIVE TIMES stronger than traditional elastic straps, with a recommended maximum load of 40kg (90 lbs).
2. **ADJUSTABLE** - ROK™ straps have two portions; one is elastic, so it will stretch to fit, the other is adjustable webbing. Unlike bungees they do not rely on elasticity to secure a load, which means that a wider variety of weights and shapes may be transported.
3. **QUICK RELEASE BUCKLE** - ROK™ straps shatter-resistant quick-release buckle gives easy access to luggage without removing the strap.
4. **HOOKLESS** - ROK™ straps do not use hooks to secure them to the vehicle. Instead there is a loop at each end, which can be fixed onto existing luggage hooks on the motorcycle. Alternatively the strap can be wound around a grab handle, frame or luggage rack and passed back through the loop to secure it. Either way, there is no danger of hooks becoming detached or scratching bodywork.

ROK™ straps measure 25 x 1400mm (1" x 54") and sell in pairs for **£17.00** Including VAT at 15%. They can easily be carried under the seat of most machines or even in a jacket pocket, so they are always available for lashing down a load.
